

Lab 11

File Management in Windows

(Create, Rename, Delete, Copy, Move Files and Folders)

Objective:

- To learn basic file and folder operations in Windows.
- To practice creating, renaming, deleting, copying, and moving files and folders.
- To understand the organization and management of data on a computer.

Theory:

File management is the process of organizing and handling files and folders in a computer system. Efficient file management improves productivity and helps prevent data loss.

Basic File Operations:

- **Create:** Make new files or folders.
- **Rename:** Change the name of a file or folder.
- **Delete:** Remove unwanted files or folders.
- **Copy:** Duplicate files or folders in the same or different location.
- **Move:** Transfer files or folders from one location to another.

Requirements

- Computer/Laptop with Windows OS
- File Explorer / Windows Explorer

Procedure

A. Creating Files and Folders

1. Open **File Explorer**.
2. Navigate to the desired location (e.g., Desktop or Documents).
3. Right-click → **New** → **Folder** → Name it **LabFiles**.
4. Inside the folder, create new text files:
 - Right-click → **New** → **Text Document** → Name it **File1.txt**, **File2.txt**.

B. Renaming Files and Folders

1. Right-click **File1.txt** → **Rename** → Enter **Experiment1.txt**.
2. Rename **LabFiles** folder to **LabDocuments**.

C. Deleting Files and Folders

1. Select **File2.txt** → Press **Delete** or right-click → **Delete**.
2. To permanently delete: Press **Shift + Delete**.
3. Delete the **LabDocuments** folder after confirming.

D. Copying Files and Folders

1. Select **Experiment1.txt** → Right-click → **Copy**.
2. Paste it in another location (e.g., Desktop).
3. Copy the entire folder to a USB drive or another folder.

E. Moving Files and Folders

1. Select **Experiment1.txt** → Right-click → **Cut**.
2. Navigate to a new folder → Right-click → **Paste**.
3. Verify that the file has moved to the new location and no longer exists in the old location.

F. Using Keyboard Shortcuts

- **Ctrl + C** → Copy
- **Ctrl + X** → Cut / Move
- **Ctrl + V** → Paste
- **F2** → Rename
- **Delete / Shift + Delete** → Delete

Observations

- Files and folders were created successfully.
- Renaming reflected immediately in File Explorer.
- Deletion removed files/folders from the location.
- Copying and moving operations worked as expected.
- Keyboard shortcuts improved efficiency.

Assignment:

Task 1: Create Folders and Files

- Create a folder named **LabWork**.
- Inside it, create three text files: **FileA.txt**, **FileB.txt**, **FileC.txt**.

Task 2: Rename Files and Folders

- Rename **FileA.txt** → **ExperimentA.txt**.
- Rename folder **LabWork** → **LabExercises**.

Task 3: Delete Files and Folders

- Delete **FileC.txt**.
- Delete the folder **LabExercises** after backing up necessary files.

Task 4: Copy Files and Folders

- Copy **ExperimentA.txt** to Desktop.
- Copy **LabExercises** folder to another location or USB drive.

Task 5: Move Files

- Move **ExperimentA.txt** into a new folder **CompletedExperiments**.

Task 6: Use Keyboard Shortcuts

- Repeat copy, move, and delete tasks using **Ctrl+C**, **Ctrl+X**, **Ctrl+V**, **Delete**.
- Observe speed and efficiency compared to mouse operations
