Lab #11

Objective:

To learn essential file and folder management operations in Windows.

Abstract:

This lab focused on understanding how to create, rename, move, and delete files and folders within the Windows environment.

Procedure:

1. Explore the Windows File Explorer.
2. Practice creating new folders.
3. Rename files and move them to different locations.
4. Delete unwanted files safely.

Assignment:

Create a folder named 'LabWork', add three files inside it, rename them, and then move the folder to another directory.
